

CYCLOFLOW

CYCLONIC FILTRATION FOR MACHINE TOOL COOLANTS & FLUIDS

The perfect system for removing a variety of fines from cutting fluids.

The CycloFlow is a robust, general purpose filtration system for machine tool coolants and other fluids. The key feature of this system is its cyclonic filtration unit which uses no moving parts, no filter media and is up to 98% efficient at 10 micron. This system is perfect for removing a variety of fines from cutting fluids. There is an on-board pump that draws from the coolant tank, pumps through the cyclonic filter unit, and then through the large industrial grade bag filter. The system can be configured to be permanently installed on one machine, or it can be ordered with the 115v power option to make it a mobile unit. The compact size and heavy duty filtration performance make this a great unit for many different applications.

FEATURES

- 18 GPM (68 l/min)
- Cyclonic filtration
- Size #2 bag filter housing
- Transfer pump built in
- Caster wheels
- 208/230 VAC
- 115 VAC optional
- 2-year warranty

APPLICATIONS

- Preventative maintenance of multiple machines
- Continuous filtration (dialysis) of one machine
- Wire EDM to extend life of OEM filters

MADE IN THE U.S.A.
