

UPGRADE YOUR PIT

Upgrade your maintenance pit with Hennig's automated walk-on covers, featuring cutting edge technology and the best reliability in the industry. Our covers allow you to transition from an open pit with fall hazards to a closed pit with a walk on surface that can support over 1,000 lbs.

WALK-ON PIT COVER FEATURES

Protective Canister

Protective canister housing can be provided to add protection to the walk-on covers when they are retracted.

- Floor mounting option
- In-Pit mounting options

Walk-On Material

We offer stainless steel (with supports) and aluminum covers. Because we choose the material based on the environment it operates in, our walk-on covers are always optimized specifically for your application.

Non-Slip Surface

A non-slip surface can be added so that personnel may walk across the covers surface with greater safety than walking across a slippery surface.

Actuation Options

Active Systems

- Actuated with an electric gear motor.
- Control box included with lockout/tagout feature.
- Simplistic design with sophisticated results.

Passive System

- Allows your machinery to do the work of pushing and pulling out the cover with ease.

Modular Construction

If a few feet become damaged, you can swap out only the damaged sections without having to replace the entire cover.

Don't just take our word for it. See how we increased efficiency and reduced maintenance for a large water treatment facility in this incredible video testimonial.
